

BUHRS *BB300*

Good to know that business is running smoothly

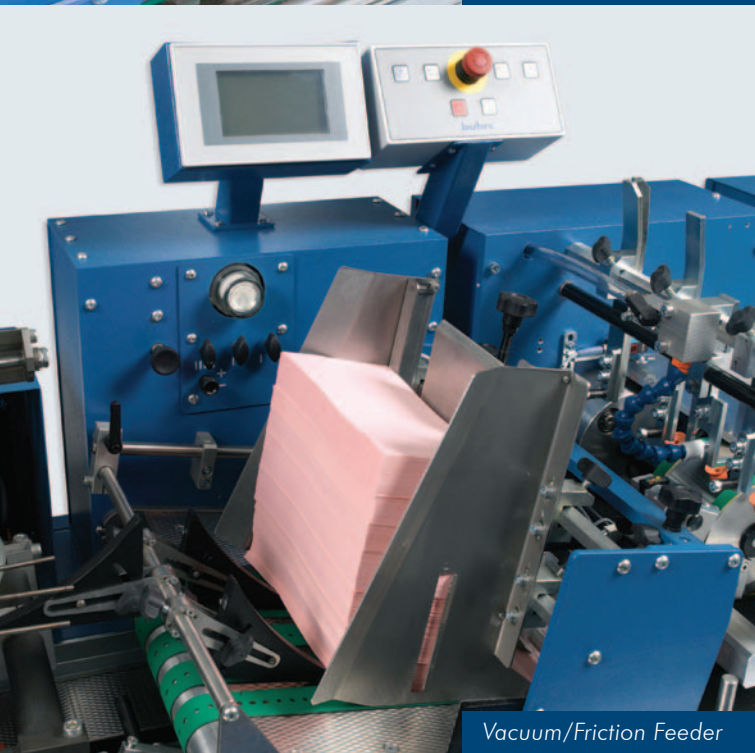

The machine is highly flexible: It can easily and quickly be set to handle all popular DIN formats and special formats such as square or creative envelopes as well as envelopes with multiple windows. So you can not only process standard projects but also very specific enveloping requests of your customers, even if that means adding CDs or product samples to your mailing. Due to this competence, you can reap attractive margins while operating in niche markets which remain out of most standard providers' reach.

This Buhrs enveloping system is a partner you can count on: While you take care of management issues and business development, the BB300 handles your orders – reliably, thoroughly and quickly. And that's exactly what it takes to score points in your line of business.

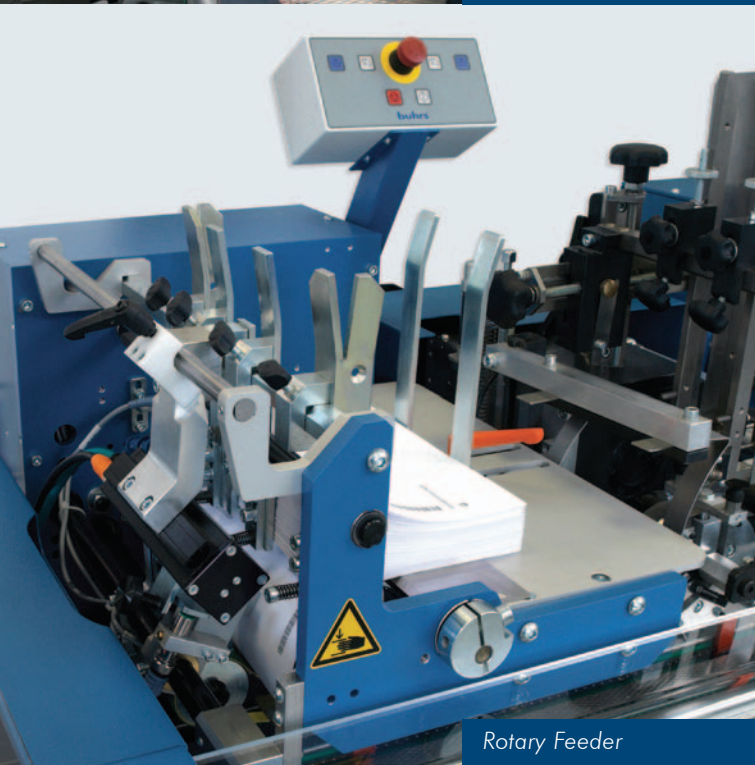

With the BB300, you can offer a special service to acquire profitable new orders and satisfied customers.

Pick & Place Feeder

Vacuum/Friction Feeder

Rotary Feeder

A Secure Basis for the Future

Flexibility is an important success factor in any type of business. When the market changes, fast and correct decisions must be made. The BB300 allows you to face the future calmly: The machine is so flexible that you can adapt to new conditions and developments as they unfold. But what if your customer asks you to handle special requests today? As the owner of a BB300, you can answer "Yes!" without batting an eye. So what are you waiting for?

Further match-winning features of the BB300 are user-friendliness and robustness. It just keeps on running. The machine will handle even large volume orders quickly and reliably. And if repairs are necessary, these can be carried out by your service personnel on site. Especially as many spare parts are available on the free market. In the end, you will have extremely low maintenance costs.

What can the BB300 do for you?

The main design principle of this machine is the combination of simplicity and efficiency: The BB300 is driven mechanically; your technician will quickly understand its proven functions. Your personnel will find it easy to operate and easy to change to other formats. To do so, we offer you an array of several feeders.

The modular concept of this enveloping system allows you to conveniently retrofit and retool the machine at any time. Would you not like to be able to react flexibly to new customer wishes on a moment's notice?

Feeders

The feeders listed below can be added to the BB300 in any order. And if needed, these feeders can be moved and used with any other enveloping systems of the Buhrs BB300 Series:

- Pick & Place feeder
- Vacuum/Friction feeder
- Rotary feeder
- Shuttle feeder
- Folding feeder

Your Additional Options

You can upgrade the machine with the following modules:

- Gimmick feeder
- Rotary feeder, rotatable by 90°
- Insert autoloader - for thinner and thicker materials
- Envelope autoloader for up to 3,000 envelopes
- Kicker for zip code separation
- Read and print applications

The BB300 at a Glance

To make sure that your decision for the BB300 is based on sound reasons, we made a list of the most important features: Due to its robust design and user-friendliness, the machine is very cost-efficient with regard to maintenance and servicing. Changing to other formats takes no more than 20 minutes which translates into low downtimes. Other advantages are:

- High net output: The intelligent handling of missed or double sheets optimises the effective output – the output quantity per employee increases.
- Intelligent Control System for fault minimisation
- Large format variety with numerous possible applications
- Various special applications which can be changed at any time

Buhrs is the leading worldwide provider of mailing and fulfilment solutions. The company develops, manufactures, sells and services systems for film and paper wrapping, envelope inserting and fulfilment.

Buhrs systems prepare media products, such as magazines, newspapers, documents, direct mail products, books, videos, compact discs and cards, for distribution.

Buhrs is partner to postal organisations, publishers, printers, binders, mailing houses, letter shops, banks, service bureaus, insurance companies, fulfilment companies and many other companies ranging from medium-sized to leading businesses.

With over 4,500 systems installed worldwide and four new installations per week, Buhrs is well-established and proud of its reputation for quality and reliability.

Headquartered in Rotterdam, Buhrs has a network of subsidiaries in the Netherlands, Germany, France, the United Kingdom, Finland, the United States of America, Japan and China as well as industry-qualified distributors to provide global coverage.

Technical Specification

Mechanical performance

- 10,000 envelopes per hour

Envelope formats

- min. 114 x 162 mm
- max. 250 x 353 mm

Product formats

- min. 105 x 148 mm
- max. 229 x 324 mm

Product thickness

- 3 mm for rotary feeder
- 10 mm for shuttle feeder
- 13 mm for vacuum/friction feeder
- 80 g/m² - max. 180 g/m² paper weight for the folding feeder

Modularity

- 6-element or 8-element feeder basis
- Upgradeable through 4-element or 6-element feeders (max. 24 feeders)
- Space-saving footprint due to flexible design, i.e. operator and delivery side are available in several versions
- Design: right-right, right-left or left-left, left-right as mirrored versions
