pitney bowes

Rival™ inserting system

High performance in a small footprint.

With the Pitney Bowes Rival™ inserting system, you'll enjoy performance without compromise.

Your mail operations need to be cost-effective today and be able to accommodate future growth. Given the critical importance of your investment, you should also achieve reliability, accuracy, flexibility and support.

With the Pitney Bowes Rival inserting system, you'll enjoy performance without compromise. The Rival delivers high performance capabilities in a small footprint, designed to help you deliver customer communications each and every day.

Built on the proven Productivity Series inserting platform, this mid-range mail finishing solution delivers proven results on an easy-to-use platform.

High performance meets world-class accuracy.

It's expected that you successfully insert multiple pieces in a single envelope with virtually flawless accuracy. The Rival inserting system maintains the highest levels of performance during peak processing periods. The precision mailpiece tracking and monitoring ensures accurate processing for each and every mailpiece.

- Consistently meet SLAs with high productivity throughput.
- Maximise production for variable page statements.
- Accurate assembly of mailpiece contents ensures reliable mail security.
- Manage your operation with comprehensive productivity reporting.

Focus on what's important…
your business

Flexibility enables you to do more and do it better.

With a modular, scalable platform, the Rival™ inserting system can be configured to meet your mail processing requirements, now and in the future. You can consolidate existing systems, increase your production capacity and process a wide array of letters and flats applications on the same system. The high performance input document feeders precisely handle statements with the flexibility to support varying material substrates.

- Increase production capacity and expand services with letter and flats processing on a single platform.
- Process a broad range of insert and envelope styles.

- Process all standard folds (C, Z, half, double and no fold)
- Ensure accurate mailpiece assembly with integrity scanning (OMR, Barcode, 2D and OCR)

Simplicity is automated.

With the simplified setup feature, the Rival inserting system enables you to spend less time on setup while achieving consistent, accurate results. The automated fold capability lets fold settings be saved for each job. That ensures easy setup and quality results for each mailing. Plus, the Rival features an intuitive user interface that lets operators know if there's a problem in time to make adjustments.

Big cost-efficiencies in a small package.

The Rival inserting system has a small footprint. Its compact input and configurable output modules are designed to maximise output in less space. The ergonomic design helps to increase operator productivity.

- Continuous loading, high capacity feeders and stackers maximise uptime.
- Reduce operator downtime with open paper path access.
- The intelligent material control helps prevent stoppages, downtime and manual reconciliation.

Production made intuitive.

The Rival™ is built on the unparalled reliability of the proven Productivity Series platform. Its intuitive graphical user interface is designed to save you valuable production time. Plus, with its simple job set up and recall for common applications, you'll be able to reduce your changeover times. The easy, tool-less setup makes job changeover simpler than ever.

Continuous loading, high capacity feeders maximise operational efficiency

Maximise productivity for variable page jobs

pitney bowes Rival™

Letter and flats capable platform

Keep operators focused on productivity

Streamline workflow with optional envelope printing

Compact footprint provides more value per square meter

We're here to help.

With Pitney Bowes' global technical support, we'll make sure that your investment maximises its potential. We're committed to getting your operations productive quickly with best-in-class installation and integration of your inserting equipment.

- Track and capture production data to help achieve the highest levels of integrity and reporting in your operations.
- Optimise your SLA performance as a result of production mail environment process improvement, saving you time and money.

- Engage the right repair services, technical support and parts strategies.
- Help optimise your print performance and productivity.

Specifications

Specifications	
Mailpiece size	DL, C5, C4
Length	171 mm x 330 mm (6.3/4'' to 13')
Depth	101 mm x 254 mm (4" to 10")
Document length	Cut 178 mm x 356 mm (7" to 14") Continuous 93 mm x 356 mm (3.67" to 14")
Document width	178 mm x 305 mm (7" to 12")
Fold types	C, Z, half, double, no fold
Speed	Up to 10,000 env/hour, 12,000 env/hour (optional)
Integrity scanning	OMR, Barcode, 2D, OCR

Built on the proven Pitney Bowes Productivity Series inserting platform, this mid-range mail finishing solution delivers results on an easy-to-use platform.
